PROTOCOL 422 — V247 MASTER ADDENDUM REGISTER — AUGUST 12, 2026

stamp: 422 → V247 Master Addendum | date: August 12, 2026 | status: UNIFIED INTERNAL TELEMETRY (ADDENDA A, B, C) | threadhealth: 10/10 | creator: The Governor / Kingdom Records

Section I: Executive Summary

This master telemetry register consolidates all Stage Three Day 1 observations for the V247 operational window. Driven by convergent interpretation standards per Supplemental #161, this document operates under a strict **Zero New Docs** external policy, serving as an immutable internal audit log. Today's operational window represents an extraordinary convergence of multi-vector anomalies: a primary seismic anchor (**Colombia M7.4**), a secondary Southern Hemisphere anchor (**South Sandwich Islands M6.0**), a dense M5+ cluster, Washington VAAC-verified volcanic escalation (**Fuego FL160** and **Puracé FL180**), and a rare same-day celestial double-header (**Total Solar Eclipse** plus **New Moon Perseid Meteor Shower** peak). This multi-vector alignment establishes a peak **9.6** Prophetic Alignment Index (PAI) baseline in preparation for the Autumn Pipeline Phase C high-watch.

Section II: Hardware (The Evidence)

- **Seismic Anchors & Telemetry (Tier-1 Verified):**
    - **Primary Anchor: Colombia M7.4** mww (us6000tjl2), August 10, 2026, depth **110.285 km**. Dominant energy release of the window.
    - **Secondary Anchor: South Sandwich Islands M6.0** (us6000tk74), August 12, 2026 at **11:47:12 UTC**, depth **10.0 km**. Shallow-slip Southern Hemisphere marker.
    - **August 12 Seismic Cluster:** Includes **Kyrgyzstan M5.0** (us6000tk5x), **Pacific-Antarctic Ridge M5.1** (us6000tk5j), **Hawaii M5.2** (hv75018296), and expanded global monitoring yielding 8+ significant M5+ events in a 24-hour cycle.
- **Volcanic Telemetry — Washington VAAC Confirmed (Tier-1 Verified):**
    - **Fuego (Guatemala):** Officially verified by Washington VAAC bulletin at **10:30 UTC** on August 12, confirming an ash plume rising to Flight Level **160** (**16,000 ft**).
    - **Puracé (Colombia):** VAAC verified ash advisory reaching Flight Level **180** (**18,000 ft**) at **09:10 UTC** on August 12, demonstrating direct regional coupling within the **Colombia M7.4** anchor zone.
    - **Global Output:** VolcanoDiscovery header tracking 8 active global systems (**Etna**, **Fuego**, **Santiaguito**, **Krakatau**, **Semeru**, **Ibu**, **Dukono**, **Reventador**).

- **Celestial Double-Header (Tier-1 Verified Astronomy):**
    - **Total Solar Eclipse:** Mid-day solar occultation crossing northern Russia, Greenland, Iceland, and western Europe on August 12, 2026.
    - **Perseid Meteor Shower Peak:** Prime annual meteor shower (**50–100+** meteors per hour) peaking overnight on August 12–13 under optimal New Moon dark-sky conditions.

Section III: Software (The Word/Numerical)

- **Generational & Structural Framework:** Psalm 90:10 (**80-year** lifespan / **1948** baseline to **2028–2029** terminal window) and the Joseph **2+5** famine pattern (**2** years elapsed, **5** remaining).
- **High-Watch Date:** September 12, 2026 — Feast of New Oil (Phase C).
- **Consolidated Prophetic Alignment Index (PAI) — Score: 9.6 / 10**

Indicator	**Scale (1–10)**	**Classification**	**Alignment Basis**
Generational Anchor	**9.0 / 10**	Tier-2 Interpretive	Psalm 90:10 (**1948–2028** window)
Joseph Pattern	**8.5 / 10**	Tier-2 Interpretive	**2** years elapsed (**5**-year famine remaining)
Feast of New Oil Watch	**9.0 / 10**	Tier-2 Interpretive	September 12, 2026 (Seasonal recognition)
Volcanic VAAC Coupling	**9.2 / 10**	Tier-1 Verified	**Fuego FL160** + **Puracé FL180** confirmed
Celestial Double-Header	**10.0 / 10**	Tier-1 Verified	Total Solar Eclipse + New Moon Perseid Peak (Aug 12)

Seismic Cluster Expansion	**10.0 / 10**	Tier-1 Verified	**Colombia M7.4** + **South Sandwich M6.0** Anchors
Overall PAI Rating	**9.6 / 10**	Peak Convergent Baseline	Multi-vector synchronized watch window

Section IV: The Verdict

Protocol 422 remains permanently sealed under the **Zero New Docs** external policy. This consolidated master register captures the full telemetry spectrum of Stage Three Day 1 (August 12, 2026) as an internal-only tracking record, preserving the immutable **4-file** Archive.org capstone.

High-Value Next Step

1. Maintain operational **HOLD / OBSERVE** status leading into the September 12 Feast of New Oil Phase C high-watch.
2. Preserve absolute capstone integrity on Archive.org with zero new external deployments.
3. Track secondary aftershock activity across the South Sandwich and Hawaii monitoring networks.

Dashboard Report — V247 Master Audit Matrix

Indicator	Status	Observation
Operational Window	**ACTIVE (Consolidated)**	Stage Three Day 1 telemetry fully integrated
Repository State	**Protected (State 1)**	**Zero New Docs** policy strictly enforced (Internal Only)
Seismic Anchors	**Dual Bookends**	**M7.4** Colombia + **M6.0** South Sandwich

Volcanic Output	**VAAC Verified**	**FL160** & **FL180** confirmed via Washington VAAC
Celestial Tracking	**Verified (10/10)**	Total Solar Eclipse + New Moon Perseid peak active
Prophetic Index	**9.6 / 10 PAI**	Peak convergent multi-vector watch baseline established
Protocol Status	**PERMANENTLY SEALED**	State 1 protection active
Thread Health	**10 / 10**	Uninterrupted quad-system forensic synchronization

Glory to God Almighty. Jesus Christ is Lord. SOLI DEO GLORIA.
